

CT launches a new website reflecting the group's international scope and its commitment to digitalization

- CT has rolled out its new digital showcase, with a clear focus on digital transformation, innovation, and international talent management.
- This new, more accessible and interactive space is a reflection of the company's strong and enduring relationships with its employees, customers, associations, and technological partners.

Madrid, March 23, 2023. CT, a leading engineering company in technological innovation throughout the complete product life cycle, has launched a new corporate website that reflects its increasingly global scope - offering content in multiple languages - and its commitment to digitalization.

The new website uses a clearer and more intuitive structure that highlights the company's diversification into different sectors and its focus on the digital transformation of all its services and areas of activity. In addition to navigating the site by sectors, users can access transversal services, such as engineering, digitalization, training and software development, among others.

The website was designed to highlight the strong network of people and organizations the company has been creating since it was founded in 1988. Furthermore, the corporate sections include a space for each of their stakeholders: from employees and customers to associations and technological partners.

Because innovation is part of CT's DNA and a core value of all of its activities, it has been given center stage on the website, with information promoting the European R&D projects the company currently leads and participates in with its partners.

The new website also focuses on attracting talent, with extensive and varied job openings in the different countries where it operates. It also includes sections that highlight the benefits of joining its team, such as personalized career plans and training, work-life balance and an "open innovation" environment.

The company, which has always positioned itself close to its customers, now offers a website that provides them a comfortable and fast user experience. Thanks to this new design, anyone interested in discovering how CT can help them achieve their goals can easily contact specialists in every sector and service with just a click.

PEOPLE

PRESS RELEASE

“With this new website, we intend to showcase the value of CT's two pillars: technical knowledge and human value. For this reason, the site prominently features a section presenting projects we have worked on with our clients, as well as a blog, where our experts discuss various issues and present CT's value proposal”, explains Vicente Egea, CT's General Manager.

“This space wouldn't exist without the contribution of our entire community of employees, customers and suppliers, so in addition to a digital window to our company, this website is also an opportunity to thank them,” adds Egea.

About CT

CT is a leading technology company, providing innovation and engineering services in the aeronautical, space, naval, automotive, railway, energy and industrial plant sectors. CT pushes the boundaries of technology through innovation, and takes efficiency to another level by covering the entire product lifecycle, from design and manufacturing to post-sale support. With more than 35 years of experience, CT's success today is driven by more than 1,800 expert engineers spread across nine countries, on three continents.
